Body Shop Requirements from Pulling to Painting

January 1, 2011

For Immediate Release

STRIPE ELIMINATOR SYSTEM **Universal Hardware Now Fits All Tools – Air and Electric** *Now Waterborne Approved*

Motor Guard Corporation has announced improvements to their popular stripe and decal remover, the E-4000S Stripe Eliminator System. For years the tool of choice for refinishing professionals, the *New and Improved* product features a special *Reformulated Wheel Compound* which provides superior performance on today's *Clear Coats and Waterborne Materials*. The E-4000S now also ships with a *Universal Hardware Kit* allowing the wheel to be used with all popular air and electric tools.

No special adapters are required.

- Removes pin-stripe tape, decals, emblems and adhesives with no residue or cleanup
- Reformulated compound retains heat to prevent burning or discoloration on clear coats and waterborne finishes
- Fits all popular tools, air and electric
- Environmentally friendly wheel compound is non-toxic and dust free
- Highest quality, made in USA

The soft, resilient material acts like an eraser, stripping away material and leaving the finish like new with no residue or cleanup. Unlike similar products, the Stripe Eliminator can be used on all popular air and electric tools. From low speed (1000 RPM) battery powered tools to high speed (4000 RPM) air tools, the E-4000S System is the most versatile stripe remover available
